

Company Profile

Coco Deli was started by Rosanna, Delio, and Rodel Sinapilo. It's a social enterprise that has made its mark by offering a range of coconut sap products such as coco sugar, coco aminos, coco cider vinegar, coco nectar syrup, and lambanog. They've also expanded to produce tasty and healthy snacks like lettuce and mushroom chips.

The company isn't just about selling products; it's about making a positive impact. Coco Deli runs a farm-to-table restaurant that uses fresh ingredients from their own farms, ensuring that everything they serve is both delicious and responsibly sourced.

Coco Deli is also at the forefront of agricultural innovation. They have a hydroponics farm where plants grow in a water-based, soil-free system, which saves water and space. Their mushroom farm not only supplies their restaurant but also produces mushroom chips sold directly to customers.

Another inspiring part of their business is the satellite hydroponics and mushroom farms managed by senior citizens, persons with disabilities (PWDs), and single mothers. These farms provide meaningful employment and support, helping these groups earn a steady income and feel valued in the community.

Coco Deli operates on the principle of helping while earning. They focus more on what they can give back to the community rather than what they can gain. This approach has helped build a business that is not only profitable but also beneficial to everyone involved.

Through its innovative practices and focus on community, Coco Deli shows how businesses can do well financially while also doing good socially and environmentally. In today's business world, where profit often takes precedence, Coco Deli stands out by proving that companies can succeed while positively impacting society and the environment.
